*From #BlackLivesMatter to Black Liberation* -  
Keeanga-Yamahtta Taylor 2016-02-01

The author of *Race for Profit* carries out “[a]  
searching examination of the social, political and  
economic dimensions of the prevailing racial  
order” (Michelle Alexander, author of *The New  
Jim Crow*). In this winner of the Lannan Cultural  
Freedom Prize for an Especially Notable Book,  
Keeanga-Yamahtta Taylor “not only exposes the  
canard of color-blindness but reveals how  
structural racism and class oppression are joined  
at the hip” (Robin D. G. Kelley, author of  
*Freedom Dreams*). The eruption of mass protests  
in the wake of the police murders of Michael  
Brown in Ferguson, Missouri, and Eric Garner in  
New York City have challenged the impunity  
with which officers of the law carry out violence  
against black people and punctured the illusion  
of a post-racial America. The Black Lives Matter  
movement has awakened a new generation of  
activists. In this stirring and insightful analysis,  
activist and scholar Keeanga-Yamahtta Taylor  
surveys the historical and contemporary ravages  
of racism and the persistence of structural  
inequality, such as mass incarceration and black  
unemployment. In this context, she argues that  
this new struggle against police violence holds  
the potential to reignite a broader push for black  
liberation. “This brilliant book is the best  
analysis we have of the #BlackLivesMatter  
moment of the long struggle for freedom in  
America. Keeanga-Yamahtta Taylor has emerged  
as the most sophisticated and courageous  
radical intellectual of her generation.” —Dr.  
Cornel West, author of *Race Matters* “A must  
read for everyone who is serious about the  
ongoing praxis of freedom.” —Barbara Ransby,  
author of *Ella Baker and the Black Freedom  
Movement* “[A] penetrating, vital analysis of race  
and class at this critical moment in America’s  
racial history.” —Gary Younge, author of *The  
Speech: The Story Behind Dr. Martin Luther  
King Jr.'s Dream*

**The Biology of Exercise** - Michael J. Joyner  
2017

Exercise training provokes widespread  
transformations in the human body, requiring  
coordinated changes in muscle composition,  
blood flow, neuronal and hormonal signaling,  
and metabolism. These changes enhance  
physical performance, improve mental health,  
and delay the onset of aging and disease.  
Understanding the molecular basis of these  
changes is therefore important for optimizing  
athletic ability and for developing drugs that  
elicit therapeutic effects. Written and edited by  
experts in the field, this collection from Cold  
Spring Harbor Perspectives in Medicine  
examines the biological basis of exercise from  
the molecular to the systemic levels.

Contributors discuss how transcriptional  
regulation, cytokine and hormonal signaling,  
glucose metabolism, epigenetic modifications,  
microRNA profiles, and mitochondrial and  
ribosomal functions are altered in response to  
exercise training, leading to improved skeletal  
muscle, hippocampal, and cardiovascular  
function. Cross talk among the pathways  
underlying tissue-specific and systemic  
responses to exercise is also considered. The  
authors also discuss how the understanding of  
such molecular mechanisms may lead to the  
development of drugs that mitigate aging and  
disease. This volume will therefore serve as a  
vital reference for all involved in the fields of  
sports science and medicine, as well as anyone

seeking to understand the molecular  
mechanisms by which exercise promotes whole-  
body health.

scientific understanding of biological processes

**Outcomes in Clinical Trials** - Martin Kolb  
2013-12-01

The traditional end-points for clinical studies of  
lung diseases were based on functional  
parameters. Their value as surrogate markers  
for disease activity and progression has been  
increasingly questioned by scientists, carers,  
regulatory agencies and funding bodies. Novel  
tools and methods with regard to biomarkers  
and patient-reported outcomes have made these  
parameters emerge from their status as  
interesting secondary end-points and become  
potential primary outcomes for clinical trials.  
Nevertheless, their relevance and validity still  
needs to be proven. This issue of the European  
Respiratory Monograph describes the current  
status regarding end-points in all relevant areas  
of pulmonary medicine.

*The Character Gap* - Christian B. Miller 2018  
We like to think of ourselves, our friends, and our families as pretty decent people. We may not be saints, but we are basically good, fairly honest, relatively kind, and mostly trustworthy. One of the central themes of 'The Character Gap' is that we are badly mistaken in thinking this way. In recent years, hundreds of psychological studies have been done which tell a rather different story. We have serious character flaws that prevent us from being good people, many of which we do not even recognize in ourselves. Does this mean that instead we are wretched people, vicious, cruel or hateful? Christian Miller does not argue that this is necessarily the case either.
